KENAN JIANG

Anticipated Graduation: May 2029
Location: Atlanta, GA | Bay Area, CA
Availability: May 2027 - Aug 2027

Google Scholar kenanjeffjiang@gmail.com

EDUCATION

8/2024 - Present **Emory University**
Ph.D. in Computer Science
Advisor: Prof. Li Xiong
Research Focus: AI agent safety, privacy, and recursive self-improving agents;

8/2017 - 5/2021 **University of California, Berkeley**
B.A., Double Major in Computer Science & Applied Mathematics

SELECTED PUBLICATIONS

Reason-Intensive Retrieval **SkillQR: Agentic Skill Discovery for Reason-Intensive Query Rewriting** ***Under Review***
Kenan Jiang*, Meixiu Long, Zihao Zhang, Ran Xu, Eugene Agichtein, Fei Liu*
SkillQR introduces an agentic framework that discovers and applies task-relevant skills to rewrite complex, ambiguous queries, improving information retrieval effectiveness.

Multi-agent LLMs **HARBOR: Exploring Persona Dynamics in Multi-Agent Competition** ***AACL 2025***
Kenan Jiang*, Li Xiong, Fei Liu*
HARBOR is a realistic housing-auction testbed for AI safety research on persona-driven LLM agents. It exposes how persona prompts can induce irrational reasoning, creating risks in agent decision-making.

Vision-Language Model **ComCLIP: Training-Free Compositional Image and Text Matching** ***NAACL 2024***
Kenan Jiang*, Xuehai He, Ruize Xu, Xin Wang*
ComCLIP is a training-free method that decomposes images into subject, object, and action regions for compositional matching, improving zero-shot performance across compositional benchmarks without fine-tuning.

Deep Learning Optimization **Wavelet: Efficient DNN Training with Tick-Tock Scheduling** ***MLSys 2021***
Guanhua Wang, Kehan Wang, ***Kenan Jiang****, Xiangjun Li, Ion Stoica*
Wavelet is a distributed-training system that interleaves peak GPU-memory demand through tick-tock scheduling, accelerating DNN training by up to 6.7× over conventional parallelism techniques.

INDUSTRY EXPERIENCE

5/2026-8/2026 **LLM Agent R&D Intern** **BOSCH, Sunnyvale**
- Researched recursive self-improving agents for iterative software-engineering improvement.
- Developed a novel evolutionary algorithm for coding agents; patent pending.

5/2025-8/2025 **AI Intern** **PRGX Global Inc. Atlanta**
- Built a robust backend pipeline to migrate legal documents into Elasticsearch, enabling contextual vector search while accounting for failures, timing, and refresh rates.
- Authored comprehensive documentation and operational standards to enable seamless maintenance and handoff.

7/2021 - 11/2023 **ML Software Engineer** **Linqia, Inc. San Francisco**
- Built a content similarity search service, achieving a 5x expansion in search results.
- Built and monitored API services that delivered data visualizations to the frontend across 5,000+ search results.

SERVICE & HONORS

Reviewer: ACL SRW 2024; EMNLP 2026

Honors: AI Safety Fellowship at Georgia Tech (Fall 2026); Tinker Research Grant ($5K); Emory M.S. CS Scholarship (50% tuition)

Teaching Assistant: Graduate-Level NLP Course at Emory (Fall 2025, Spring 2026, Fall 2026)
